ZAID ULLAH

Python & AI Engineer · Backend and Data Systems Islamabad, Pakistan

+92 332 851 6774 / +92 336 585 6052 · zahidu864@gmail.com · linkedin.com/in/zaid-ullah07 · github.com/ZaidArman · zaidarman.github.io

PROFESSIONAL SUMMARY

Python and backend engineer with 3+ years of professional experience building production systems for telecom-grade network analytics, currently delivering backend services and operational analytics for Cisco KSA programmes. Specialises in Django/Flask/FastAPI/Node.js REST APIs, ETL and time-series data pipelines (InfluxDB), and real-time monitoring and visualisation with Grafana and SolarWinds. Also experienced in applied machine learning and Gen-AI integration, fine-tuned models, LLM/RAG features, and predictive modelling through a WorldQuant University data-science apprenticeship and shipped product work. Comfortable owning a feature end to end: data ingestion, API design, deployment, and the dashboards stakeholders actually use.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), Node.js, SQL, C/C++, HTML, CSS

Backend & APIs: Django, Django REST Framework, Django ORM, Flask, FastAPI, Node.js (Express.js), REST API design, microservices

AI / Machine Learning: scikit-learn, PyTorch, TensorFlow, Hugging Face, LangChain, model fine-tuning, LLM/RAG features, ML & DL pipelines

Data & Analytics: Pandas, NumPy, ETL pipelines, time-series analysis, data cleaning & wrangling, feature engineering, statistics, visualisation, Streamlit

Databases: PostgreSQL, MySQL, InfluxDB, query optimisation

Monitoring: Grafana, SolarWinds, KPI dashboards, automated alerting

Cloud & DevOps: AWS (EC2), Docker, Git, GitHub, CI/CD pipelines

PROFESSIONAL EXPERIENCE

Backend & Operational Analytics Engineer (Python)
Jan 2026 – Present

NETS-International Group Saudi Arabia · Remote

- Design and maintain RESTful APIs in Django and Flask for real-time ingestion and processing of submarine-cable network telemetry, building for reliable handling of large operational datasets.
- Develop ETL pipelines that transform raw time-series operational data into analysis-ready datasets for submarine-cable utilisation and performance-trend reporting.
- Build real-time Grafana and SolarWinds dashboards with automated alerting, so network-health issues are detected and resolved proactively rather than reported after the fact.
- Work directly with Cisco KSA engineering teams on network-optimisation initiatives improving submarine-cable efficiency, reliability, and end-to-end visibility.

Python Developer — Cisco KSA Team
Feb 2025 – Jan 2026

Extravis Islamabad, Pakistan · On-site

- Built and optimised data pipelines for submarine-cable utilisation analytics, cutting the lag between raw network data and usable operational insight for the Cisco KSA team.
- Developed and maintained scalable Django and Flask REST APIs for real-time data ingestion and processing, with an emphasis on reliability and maintainability under growing data volumes.
- Established network observability using InfluxDB, SolarWinds, and Grafana, defining KPIs, dashboards, and alerting that improved monitoring coverage and shortened incident response.
- Authored technical documentation and mentored teammates on backend conventions, improving consistency and long-term maintainability of the codebase.

Data Science Fellow (Apprenticeship)
Aug 2023 – Jan 2026

WorldQuant University Remote

- Completed the Applied Data Science Lab: cleaning messy real-world datasets, building regression and classification models, extracting data from SQL and NoSQL sources, and communicating results through visualisation.
- Applied end-to-end ML workflows to business problems, with attention to model selection, evaluation, and the ethical implications of deploying models in production.

Samaritan Technologies
Feb 2024 – Nov 2024

Associate Software Engineer, then Python Developer (Intern) Lahore, Pakistan · On-site

- Engineered RESTful APIs with Django and Django REST Framework for dynamic web applications, and optimised database models and queries, reducing average API response time by roughly 30%.

- Fine-tuned and integrated Gen-AI models into product features such as content generation and conversational user interaction, partnering with frontend engineers on the integration contracts.
- Implemented data-processing modules that turned application data into actionable insight for business stakeholders, improving reporting turnaround by an estimated 25%.
- Designed modular, maintainable codebases and managed deployment pipelines for continuous integration and delivery; contributed to code reviews and knowledge-sharing sessions.

Software Engineer (Freelance) Sep 2022 – May 2025

Fiverr Remote · International clients

- Delivered Python, C++, and data-analysis engagements for international clients alongside full-time work — scripting and automation, statistical analysis, and small backend and data tooling.

SELECTED PROJECTS

CERS (Consumer Electronics Retails System)

`Python · Django · DRF · ReactJS · PostgreSQL`

RP platform for inventory, supplier, sales, POS, accounting, and analytics management; designed the backend architecture, normalized data models, granular RBAC, and business workflows that centralize operations and provide actionable insights through reporting and analytics.

MIMS (Medicines Inventory management System)

`Python · Flask · SQLAlchemy · ReactJS · MySQL · AI/ML`

Healthcare inventory platform that manages **medicine stock, batch tracking, expiry alerts, prescription dispensing, and suppliers**; designed the API architecture, inventory workflows, database models, and AI demand forecasting pipeline to improve stock visibility and procurement decisions.

AI Tourist Assistant

`Python · OpenAI · LangChain · agents`

LLM agent that generates customised tour itineraries from user preferences and location data; designed the agent state and tool-calling flow that turns a free-text request into a structured, day-by-day plan.

Hate Speech Detection

`Python · Hugging Face · Streamlit`

Text-classification service that labels input as hate or non-hate speech in real time, deployed as an interactive Streamlit app for non-technical reviewers.

House Price Prediction: WorldQuant University, Applied Data Science Lab

`Python · scikit-learn · Pandas`

Regression pipeline combining OneHotEncoder, SimpleImputer, and a Ridge estimator into a single reproducible workflow, with preprocessing and model selection tuned against held-out data.

EDUCATION

BS, Computer Science 2018 – 2022

Kohat University of Science & Technology (KUST), Pakistan

CGPA 3.92 / 4.0

CERTIFICATIONS & PROFESSIONAL TRAINING

WorldQuant University: Applied Data Science Lab (project-based credential)

Coursera: Python for Everybody · Python Data Structures · Using Python to Access Web Data · Exploratory Data Analysis for Machine Learning · Supervised Machine Learning: Regression

EARLIER EXPERIENCE

Data Scientist, Intern: TechnoHacks EduTech, Remote (India): statistical analysis and NumPy/Pandas exercises on assigned datasets. Aug – Sep 2023

Python Developer, Intern: NTDC, Lahore: built REST APIs and microservices for an internal employee tour, accommodation, and expense tracking application. Jul – Aug 2022

Computer Science Teacher: PCA Hangu; VISION Education Academy; HIST School & College: taught O/A-Level Computer Science and C/C++ programming. 2017 – 2024
